Instructions for mounting your wakeboard boots

Before you start:

1. **Make sure you have all the parts needed.** This should include (1) pair of bindings and (4) mounting screws – either Phillips head screws or Thumbscrews.
2. **Determine your stance width.** Typically, you will want to have your feet shoulder width apart as a starting point then adjust if needed depending on your comfort level.
3. **Determine your binding angle.** Most riders start with the bindings angled outwards by somewhere between 8 and 12 degrees. **Typically you can find the binding stance angle marked on the plate near the mounting hole, as shown below:**

Again, this is very much based on personal preference – adjust as needed, always keeping comfort and safety in mind.

Now you are ready to mount your bindings!

1. **Locate the (4) sets of threaded inserts** on the top deck of the wakeboard as shown below.

2. **Determine the insert (a, b, or c) within the set that most closely matches the stance you want.** Since all O’Brien bindings are symmetrical, you’ll want to mount both bindings in the same
holes, meaning if you mount one binding in the center set of holes (b) mount the other binding in the same set (b).

3. Place the bindings on the board so that the binding screws line up with the proper holes and tighten! Make sure your holes are the same front and back and the binding angles match.

4. Make sure the screws are tight and now you are ready to ride. Please refer to the O’Brien Owner’s manual for safety and warranty information.
