ROTATION/SECURITY PIN

SECURITY/SHOULDER BOLT

COTTER PIN

DRILL ATTACHMENT

MANUAL

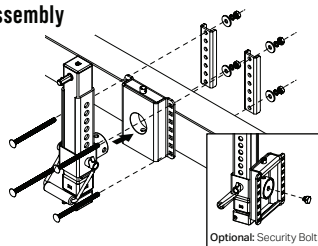

TRAILER VALET JX3-SS

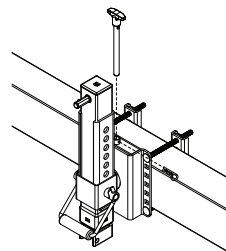

Quick Start Guide

Rev 03.19.25

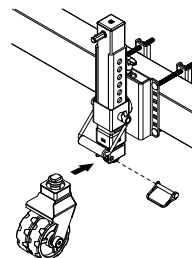

Assembly

1. Place the mounting bracket onto an 8 inch clearing on your frame where the jack can freely rotate from its vertical position to its horizontal stow position. Secure with the four included bolts at desired height.

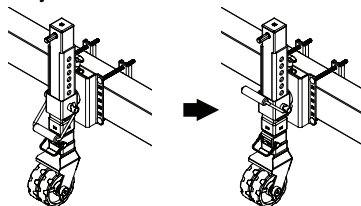

2. Install the T-handle pull pin and cotter pin to secure the jack. These pins are to be removed when either detaching or stowing the jack.

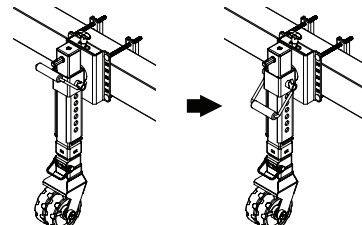

3. Slide the wheel base into the jack coupling and secure it with the rotation pin.

Height Adjustment

1. Lift the drop bracket handle to the up position to unlock the bracket.
CAUTION: When the drop bracket handle is lifted, the jack may need to be supported since the jack can drop when the handle is unlocked.

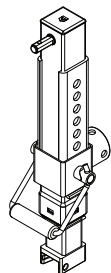

2. Move the jack to the desired height and return handle into low position to lock and secure the trailer jack.

MANUAL

TRAILER VALET JX3-SS

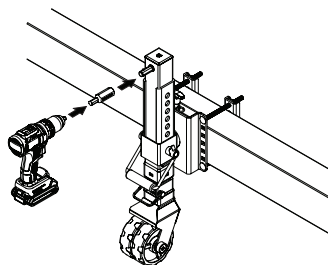

Quick Start Guide

Manual Operation

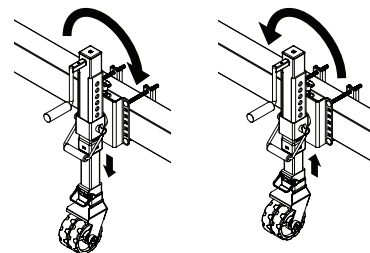

1. Attach the Hand Crank to the driveshaft located at the top of the unit.

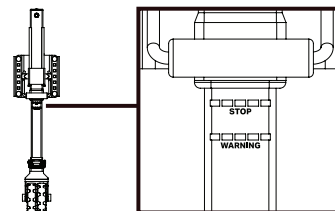

Drill Operation

1. Slot the Drill Adapter into your drill chuck and secure tightly to avoid the adapter slipping.
2. For proper use, hold the drill firmly and begin to squeeze the trigger slowly, increasing the power up to an appropriate speed.

2. Turning the handle clockwise will extend the jack. Turning the handle counter-clockwise will retract the jack.

WARNING

Gradually decrease speed when approaching maximum extension. This is indicated by a printed warning line on the inner tube of the jack.
